

Class 0
Introductions, Teams, and Preparing to Learn

CS 330
Programming Languages and Compilers

Preparing for Team-Based Learning

Team Roles (from the Syllabus)

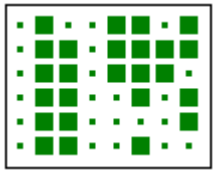

When you meet you'll start off having people take these roles.

You may keep the people in the same roles for your meetings today, but typically they are to rotate from meeting to meeting.

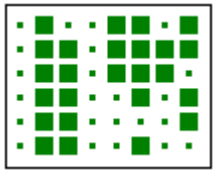

- **Chief Understanding Leader**: are we all getting this, verify understanding across team
- **Chief Equity Leader**: is everyone having a chance to contribute, can call on folks to get them engaged
- **Chief Note Taker**: For meetings other than in-class programming and RATs, this person creates a set of notes to document what was discussed

Overview of Our Process

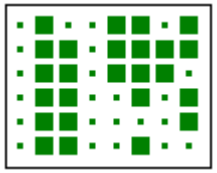

1) Teams formed
2) Teams select a name and members introduced
3) Identify learning motivations and expectations
4) Identify requirements for success in the course
5) Consider aspects of learning
6) Review the purpose of these steps

1. Teams Formed

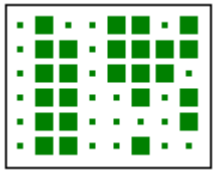

- We'll work out the teams based on our preferences
- If people drop/add or are absent today you will figure out how to handle that

2a. Teams select a name, members introduce themselves

- Meet for ~5 minutes
  1) Introduce yourselves to each other
  2) Assign roles for this task
  3) Pick a team name
     - Note-taker please be sure to track:
       1) The names of the people assigned to the three roles
       2) The team name
  4) Team introductions

2b. And The Teams Are…

ANA

Nour
Adolfo
Ankit
Kishi

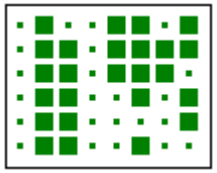

Omega

Alix
Ella
Ariuna

Alpha

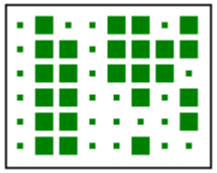

Noah
Anh
AJ

3a. Identify learning motivations & expectations

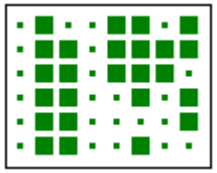

- Respond to these questions
  (do not put your name on the paper)
  1) What are one or two reasons you enrolled in this course?
  2) What are one or two things you want to get from this course?
- Crumple up the paper and throw it in the room

3b. Identify learning motivations & expectations

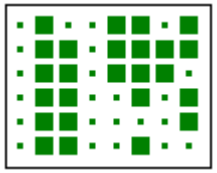

- Pick up one of the crumpled sheets
- Returning to your teams, each of you review the responses on the sheet
- Take ~5 minutes to compile two lists, summarizing the responses
- The team note taker will report the responses

3c. Report learning motivations and expectations

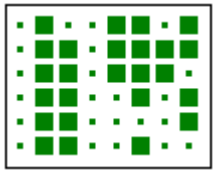

- Go through the summarized learning motivations and objectives
- I'll capture so we can get a feel for the different motivations and expectations
- Later in the semester we'll look at the full list to see how we are doing

3d. Report learning motivations and expectations

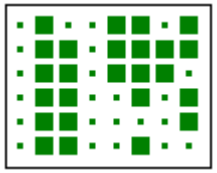

- Motivations
  - Major requirement
  - Better understanding of programming languages
  - Curiosity how machines and LLMs work
- Expectations
  - Knowledge on C syntax
  - To learn how to use AI and learn with AI
  - Proficiency with programming languages
  - More in-depth understanding of programming languages
  - Using LLM under stronger guidance
  - Understanding compilers
  -

4a. Identify requirements for success in the course

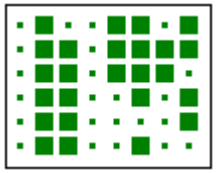

- Respond to these questions
  (do not put your name on the paper)
  1) What are two or three things that you need to do to be successful in this course
  2) What are two or three things that your team members need to do for your team to work effectively and successfully
  3) What are two or three things that the instructor needs to do for you to be successful in this course
- Crumple up the paper and throw it in the room

4b. Identify requirements for success in the course

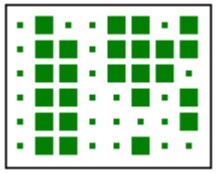

- Pick up one of the crumpled sheets
- Returning to your teams, review the responses on the sheet
- You may rotate roles (if roles change, please email updated names and roles)
- Take ~5 minutes to compile three lists, summarizing the responses
- The team note taker will report the responses to the class

4c. Identify requirements for success in the course

- Report the summarized responses across individuals, teams, and instructor
- I'll capture so we can get a feel for the different things that we think are important to our success in the class
- Later in the semester we'll look at the full list to see how we are doing

4d. Identify requirements for success in the course - output

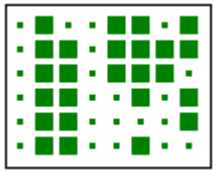

I need to...
- Find connections with material
- Pay attention and participate in class
- Do the homework and meet deadlines
- Show up to class (on time)
- Spend time outside of class on the material
- Go to office hours
- Speaking up when you have questions

The team needs to...
- Good communications
- Everyone does a fair share of the work
- Engaging with the class
- Showing up to class
- Staying on task during work sessions
- Offering a helping hand if teammate is struggling
-

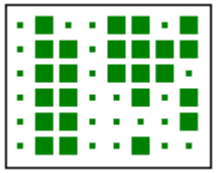

The instructor needs to...
- Be attentive to student learning
- Creating an accepting and supportive atmosphere
- Engage in class activities with us
- Teach
- Be exciting about teaching the material
- Don’t go through materials too fast
- On time grading
- Relating topics to real world situations
- Providing good resources
-

5. Explore aspects of learning

- Which do you personally think is the most important aspect of learning?
  1) learning information including facts, principles, and concepts, or;
  2) learning how to apply or use that information in new situations, or;
  3) learning how to learn (developing meta-cognition skills)?
- We'll think then we can discuss

6. Review the purpose of these steps

- Let’s discuss this process
- Consider things such as
  - Why did we go through this?
  - Was it useful?
  - What contribution does this make to the course?
  - *You aren’t limited to these questions. If you have other thoughts please share them.*
